

Post-Conference Educational Archive

The IPRG is committed to making high-quality scientific knowledge accessible to the wider international propolis research community.

- Following the conclusion of the conference, **accepted presentation recordings may become part of the International Propolis Research Group (IPRG) educational archive.**
- The archive will support **education, scientific collaboration and future research** in the field of propolis.
- By submitting an audio-visual presentation, authors grant the conference organisers permission to **archive and make the recording available after the conference for non-commercial educational and scientific purposes.**
- **Authors retain full intellectual ownership and copyright of their work.**
- The archive is intended to promote the responsible dissemination of scientific knowledge while recognising and respecting the rights of researchers and authors.
- The organisers will take appropriate steps to ensure that material is not made publicly available before the conference in a manner that could compromise the presentation or prior publication of unpublished research.

The IPRG is committed to providing a professional international forum in which researchers can share new findings, exchange ideas and develop collaborations, while maintaining high standards of scientific integrity and respect for authors' intellectual property.
